Education

University of Toronto, H.B.Sc Bioinformatics and Computational Biology Sept 2018 – August 2022

- **Coursework:** Web Programming, Computer Organization, Software Engineering, Theory of Computation, Algorithms, Software Tools & Systems Programming, Data Structures & Analysis, Calculus, Computational Systems Biology, Bioinformatics

Experience

Software Engineer, ADP Canada – Toronto, ON Sept 2024 – Present

Promoted after two years as an Associate Application Developer for performance and contributions to key projects.

- Developed and maintained robust front-end and back-end code across multiple modules of ADP's HCM software offerings, used by over 5,000 client companies; addressed technical debt, processed feature requests, and implemented bug fixes to enhance overall system reliability.
- Developed an automated AI Agent capable of conducting guided QA testing, and automated UI-development on a closed-source UI framework. Reduces QA efforts by up to 80% due to local automation, and development efforts by up to 65%.
- Led initiatives with support staff and scrum masters to improve workflow efficiency through knowledge transfers, bridging gaps between support and development teams leading to a 15% decrease in average time to resolve triaged support issues.
- Played a major role in a UI refresh of Workforce Now modules, migrating to modern components and redesigning the interface, resulting in 15% reduction in user onboarding time.
- Engineered scalable backend solutions using Java and Spring Boot, including implementing RESTful APIs and optimizing database queries, improving system response times by 15%.

Associate Application Developer, ADP Canada – Toronto, ON Sept 2022 – Aug 2024

- Developed scalable and maintainable web applications using Java, Spring-Boot, React-Redux (via closed-source UI framework) and Javascript in a full-stack environment.

Web Developer, Infrar3d – Toronto, ON January 2022 – Aug 2022

- Designed and implemented interactive web forms and data visualizations for learning management dashboards, resulting in 30% decrease in data entry errors within departments.

Projects

deckBuildr 2026

- A *Magic, the Gathering* Deck-building tool which fetches prices from large Canadian card retailers. (Python, Javascript, HTML, CSS)

Root Measurement Tool 2022

- Implemented and optimized an *arabidopsis* root measurement algorithm. Part of BCB430 Research Project (ImageJ Macro Language, Java)

SNP Databasing Project 2022

- Created a Python script to streamline workflow efficiency through automation of processing and loading of SNP data. Created as part of BCB330 Research Project for Provart Lab. (Python, R, SQL)

Technologies

Languages: Java, JavaScript/TypeScript, Python, SQL, C, Swift, R, Assembly, HTML/CSS

Technologies: Spring Boot, Claude, MCP, JUnit, Mockito, Node.js, React, Redux, Angular, Splunk, Jenkins, Postman/Newman, Express, Flask, MongoDB, AWS, Docker, Selenium, Git, JIRA, Confluence
